

Guide to installing TeraTerm Pro with ssh support (floppy disk)

NOTICE:

TeraTerm Pro is not a support product by DSG. This software is a Freeware product from the developer and as such is treated as a user installed software product. DSG has developed a User installation guide that can be used to assist in the installation process.

Once again this is a product that you use at your own risk. DSG only supplies the software for distribution and does not support or install the product locally on any desktop computer systems.

DSG Administrator

Expand zipped files from the floppy (tterm23.zip and ttssh151.zip) into a temporary folder. (e.g. c:\tempTTP and c:\tempSSH)

Execute c:\tempTTP\setup.exe

 Select language.

 Select continue at the rest of the prompts and close setup and TeraTerm window when completed.

Copy all files in c:\tempSSH
To the directory c:\program files\ttermpro

 Answer yes to any questions

To create a shortcut icon using right mouse button drag ttssh.exe from c:\program files\ttermpro to the desktop and select create shortcut when prompted.

Start ttssh.exe

 Enter the host you wish to access

 Select ssh then ok

 Select add this machine and its key when prompted

 Enter your username and password when prompted then ok.

This should facilitate an ssh session and allow pine to print to the local ascii connected printer.
